PRESENT APPOINTMENT

	2016–Present	University of Oxford, Malaria Atlas Project
Post Doc.		My current position is as a postdoctoral research scientist in geospatial epidemiology with the Malaria Atlas Project at the University of Oxford. I use spatial statistics and machine learning methods to map infectious and vector borne diseases.

PREVIOUS APPOINTMENTS

	Jan–July 2016	CBER, UCL
Research Programmer		I was the staff programmer for the Centre of Biodiversity and Environment Research at UCL. I worked on two main projects. I worked with the Madingley Model —an ecological model of all life, written in C# to enable this model to run on the high performance cluster at UCL. Secondly, I translated code from Mathematica to R for analyses of measurements of 3D objects used in paleontological research . I also provide technical support for the rest of the department.

EDUCATION

	2012–2016	University College London, CoMPLEX
PhD		<i>The role of population structure and size in determining bat pathogen richness</i> I used network epidemiological models and phylogenetic statistical methods to study the epidemiology of bat-borne diseases. As bats carry a number of important zoonotic diseases , including Nipah and Ebola, understanding the spread of these diseases within bat population and how this affects spillover to humans and livestock is increasingly important. [pdf] Supervisors: PROF. KATE JONES & DR HILDE HERBOTS
	2011–2012	University College London, CoMPLEX
MRes		<i>Modelling Biological Complexity · Merit</i> Projects included adapting ' ideal gas ' models to acoustic data, analysing moment closures for a pair-approximation model of plant ecology and applying a novel machine learning method to a library of bat calls.
	2006–2010	University of Sheffield, Animal & Plant Sciences
MBioSci		<i>Zoology · First</i> For my final project I used wavelet analysis to study multi-annual cycles in malaria incidence in Thailand.

OTHER RESEARCH EXPERIENCE

Internship	Autumn 2014	Zoön: An R package for reproducible SDMs
		I wrote the first version of an R package for <i>reproducible</i> species distribution modelling. The package uses an online repository of user submitted 'modules' to allow the software to keep up with this fast moving field and allow analyses to be completely reproducible. [Github]
Volunteer Fieldwork	2011	Smithsonian Tropical Research Institute and Chiloé Silvestre, Chile
		Two months fieldwork in Panamá on two projects: studying <i>Anolis dewlap</i> evolution and studying gut length plasticity in Red-eyed tree frogs. I also spent two weeks trapping Darwin's foxes in Chile to collect samples for geophylogenetics.
Summer Internship	August 2010	University of Sheffield
		I studied the evolutionary response of plant communities to climate change with Dr Raj Whitlock. I collected, propagated and analysed plants collected from the field.
TRANSIT Internship	August 2009	University of York, YCCSA
		I studied collective foraging behaviour by programming a <i>complex 3D foraging model</i> in Java and running simulations on a cluster at the York Centre for Complex Systems Analysis.

OTHER APPOINTMENTS AND AFFILIATIONS

Peer Review	Journals Reviewed for:
	· Methods in Ecology and Evolution, PLoS Pathogens, National Academy Science Letters

CONFERENCES

2016	Population structure and pathogen richness in bats. Presentation at <i>Epidemics5</i> , Elsevier by Lucas TCD
	Using gas models to model camera trap and acoustic sensor surveys. Presentation at <i>Statistical Ecology Research Festival</i> , University of Kent by Lucas TCD
2015	The Zoön Project: Reproducible, Remixable and Shareable Species Distribution Modelling with R. Presentation at <i>BES Annual Meeting</i> by August T, Golding N, Lucas TCD, Gavaghan D, Isaac N, O'Hara B, van Loon E & McNerny G
	Simple, Shareable and Reproducible Species Distribution Modelling with the Zoön R package. Poster at <i>BES Annual Meeting</i> by Golding N, Lucas TCD, August T, Gavaghan D, Isaac N, O'Hara B, van Loon E & McNerny G
	Comparative and computational studies of pathogen richness in bats. Presentation at Research in Progress, <i>RSTMH</i> by Lucas TCD, Herbots H & Jones KE.
	A comparative and computational study of population structure and pathogen richness in bats. Presentation at <i>Epidemics5</i> conference by Lucas TCD, Herbots H & Jones KE.
	An ideal gas model for estimating absolute abundances from bat detector data. Presentation at the National Bat Conference. [slides]
	Pathogen diversity and bat population structure. Poster at British Parasitological Society Autumn Meeting.
	Estimating abundance from camera traps and acoustic sensors.

- Presentation at CEH, Wallingford seminar series.
- 2014 Presentation at [id2oxford](#) conference. [[slides](#)]
 Poster at the CoMPLEX conference. [[pdf](#)]
- 2013 Presentation at BritBats 2 [[slides](#)].
 Invited attendance at [ecoVIZ](#) Tansley workshop.
 Poster at the CoMPLEX conference and id2 conference. [[pdf](#)]

TEACHING

- 2017 · Wrote and gave a two day workshop 'Geospatial statistics with R and INLA' at UiTM, Malaysia.
- 2015 · Demonstrator for reproducible species distribution modelling workshop run by Quantitative Ecology special interest group at BES.
- 2013–2014 · Online tutor for [SysMIC](#), a course for teaching quantitative skills to biologists.

COMPUTATIONAL SKILLS

<i>Statistical methods</i>	Geospatial statistics, machine learning, Bayesian inference.
<i>Languages</i>	R (eight years), Python, Matlab, Mathematica, Java, SQL.
<i>OS</i>	Comfortable with Windows, Mac or Linux.
<i>Other</i>	Experience in R package development, Git/Github, unit testing, continuous integration, LaTeX, web design, markdown, shell/ssh and high performance computing.
